Summary

I'm a specialist in the intersection of cloud, data, AI and DevOps. My experience building products combines cloud data engineering, self driving vehicles, platform infrastructure and data analytics.

I bring projects and peers to high impact and performance status.

Experience

MBition - Mercedes Benz Innovation Hub

Senior Software Engineer

Remote | Berlin

09/2020 - Present

- Architected and co-led development of a data platform in Databricks, Azure and AWS that serves 2 thousand teams with custom metrics for project performance management . The product led to the creation of a new department responsible of integrating defect management data sources from different global locations into the data platform.
- Led development of a dozen data products that aid in performance management of Mercedes Benz projects across organization levels from developers to to C-level executives. The data products measure project maturity, defects, build times and feature costs.
- Orchestrated provisioning and management of 1000+ AWS machines for training Nvidia Drive OS AI models for the next-gen autonomous driving software stack.
- Solved cost governance for 50+ AWS accounts by aggregating and transforming billing account datasets. Created visualization dashboard with cost saving measurements and forecast. The project resulted in savings of 2 million USD annually.

KPIT Technologies

Software Engineer

Munich

04/2018 - 08/2020

- Initiated and subsequently led the development of a video processing pipeline for scene detection and ground truth generation in vehicles for our customer, BMW. This pipeline utilized both pre-trained and fine-tuned MASK-RCNN models to classify urban, heavy urban, highway, and construction site scenarios. The resulting data catalog streamlines model training for automated driving trajectory planning.
- Developed embedded software interfaces to connect lidar, camera, and GPS sensors to the prototype BMW vehicle platform using ROS nodelets. These interfaces facilitated the collection of sensor data streams, enabling the recording of driving sessions for subsequent processing in a private data center.
- Created a Spark-based data conversion job to transform lidar and camera data into fusion object maps, which were then utilized to label data for machine learning purposes.

Mercedes Benz Trucks - Daimler

Master's Degree Candidate

Mannheim

11/2016 - 09/2017

- Developed a machine learning model to predict energy consumption for Mercedes-Benz buses by leveraging fleet driving data for training. This model enables efficient route planning for fleet customers, calculating energy consumption based on forecasted speed profiles and a comprehensive vehicle model. It anticipates driving maneuvers by assessing their probability in the training data under similar road conditions, slopes, and times of the day.

◦ Awards ◦

EGEL excellence award

Ceneval

05/2014

Achieved a top 2% ranking on the national Mechatronics undergraduate performance exam.

CONACYT scholarship

Mexican Government

05/2014

Awarded a 2-year full tuition and allowance scholarship for graduate studies abroad.

Rocca scholarship

Roberto Rocca Foundation

05/2013

Granted academic merit scholarship for undergraduate STEM students.

DAAD merit scholarship

German Exchange Service

08/2012

Awarded academic exchange scholarship for undergraduate STEM students.

ITESM merit scholarship

ITESM

08/2009

Awarded undergraduate tuition scholarship.

Education

● **University of Texas at Austin**

Artificial Intelligence

Master's degree

01/2024 - 12/2027

Online coursework. 1 course per semester on weekends.

● **Technical University of Braunschweig**

Electrical Engineering

GPA 3.0 / 4

Master's degree

09/2014 - 08/2017

- Thesis: Forecast of energy consumption for buses in city traffic. Sponsored and supervised by Daimler AG. Note: excellent, GPA 4 / 4
- Minor in Energy Technology.

● **ITESM**

Mechatronics (with honors)

GPA 3.7 / 4

Bachelor's Degree

08/2009 - 05/2014

- Specialized in Robotics and Control Engineering.

● **Reutlingen University**

Mechatronics

Academic Exchange

09/2012 - 02/2013

- Specialized on Robotics and Control Engineering.

● **University of Waterloo**

Mechatronics

Academic Exchange

05/2011 - 07/2011

- Specialized on Mechatronics design.

Projects

● **Menuop.com**

Digital menu service

January 2024 - Present

Side project that allowed me to learn additional tech stack such as payments, google analytics and frontend design.

● **Northbots.com**

AI Copilots Platform

2024 - 2025

Automation of business workflows using AI agents and data marketplace.

● **Matlab Freelancer**

Entrepreneurship

11/2017 - 03/2018

* Developed custom software for data processing and data visualization for more than a dozen clients worldwide.
